

.375 H&H MAGNUM 300 GRAIN BARNES TSX (LEAD FREE)~100% HAND LOADED!!

\$139.99

.375 H&H Magnum 300 grain Barnes Triple-Shock (TSX)~ The **.375 Holland & Holland Magnum** (9.5×72mmB) is a medium-bore rifle cartridge. The .375 H&H was only the second cartridge ever to feature a belt, now common among magnum rounds. On these new rimless cartridges the belt replaced the rim in ensuring the correct headspace, which otherwise might be unreliable, given the narrow shoulder of the cartridge case. The British company Holland & Holland introduced the cartridge in 1912 as the .375 Belted Rimless Nitro-Express.

The .375 H&H Magnum is one of the most versatile cartridges and is referred to by Jack O'Connor as the "Queen of the Medium Bores". The cartridge is very popular in Africa where it is considered one of the best all-round rifle cartridges. It is capable of taking any big species including all the Big Five game animals. The big game hunter, John "Pondoro" Taylor, held the .375 H&H Magnum in such high esteem that he dedicated a chapter in the book *African Rifles and Cartridges*.

Ammunition loaded with the 300 gr or heavier bullet the .375 H&H is adequate for heavy thick skinned dangerous game such as elephant and rhinoceros in most conditions. There is some speculation that the .375 H&H Magnum has been used to take more Big Five game than any other cartridge. Even today, many professional hunters, outfitters and wildlife management personnel in Africa continue to rely on the .375 H&H Magnum to carry out their duties throughout the continent.

Choice Ammunition meticulously hand-loads 100% of our ammunition to insure superior performance, accuracy and reliability. These 300 grain Barnes TSX loads for the 375 H&H are ideal for most dangerous game and large bodied animals. Don't compromise with "Factory" ammunition when it really counts! Choice Ammunition utilizes only the finest components and proprietary loading formulas meticulously assembled with temperature insensitive powders. This insures wherever your travels may take you- you can depend on our premium ammunition successfully to close out your hunt.

The Bullet

The Triple-Shock X Bullets (TSX) are made of 100% copper and contain no lead. When the bullet expands, four razor-sharp cutting petals are created, allowing the bullet to penetrate farther through tough bone and tissue. These bullets usually retain 100% of their original weight, making them a superb choice for hunting. This ammunition is new production, non-corrosive, in boxer-primed, reloadable brass cases.
