Arkansas Sharpening Stones

The Arkansas sharpening stone is popular with craftsmen, sportsmen, chefs and butchers. Arkansas sharpening stones will sharpen all knives and tools and are the most popular whetstone sold worldwide.

Arkansas stones are quarried from geological formations of Novaculite. Novaculite is composed of microcrystalline quartz. The unique crystalline structure of the quartz gives Arkansas stones their superior honing abilities.

Whether you're hunting the deep woods, fishing your favorite hole, cooking Thanksgiving dinner or creating a woodworking masterpiece, Arkansas stones will provide the cutting edge you need.
