Detailed Description

Original Shot Buffer (10 lbs. bulk)

Our Original Buffer is used in almost all types of shotshell loads, from 10ga to .410. A proprietary blend of buffering materials marginalize density effect and create conditions necessary for optimal pattern density. Original Buffer cushions the shot payload during critical stages of transition through areas of constriction, reducing disturbance and chaos during initial stages of pattern development. Original Shot Buffer has also been recommended by leading experts for use as a case filler in centerfire cartridges.

Our **Buffer Dipper** (pictured) makes measuring and pouring buffer quick and easy.

See buffered load data in BP loading manuals, including *Advantages*.

Part #	Product	Description
BUFFER	Original Buffer (500cc)	For all-purpose applications and metallic case filler.
MIX47	Mix #47 Buffer (500cc)	For steel shot and large buckshot loads.
BSB	BSB-ITX Buffer (500 cc)	For high-friction pellets: ITX, Hevi-Shot, Bismuth, other tungsten.
MICA	Mica Wad Slick	For wad lubrication and easier loading procedures.

PRODUCT DETAILS

**Product Type:** Shot buffering material; also works as a case filler  
**Size:** 10 lbs. bulk pack  
**Load Specifications:** see loading data in BPI manuals  
**WARNING: DO NOT BUFFER LOADS THAT DO NOT CALL FOR BUFFER IN THE LOAD DATA.**
