

Bullet Design Catalog

Click on any design to view more details.

43-250K

Approximate diameter
0.43 - .44 Magnum

Bullet weight
250 grains

Identifying letter

This expanding catalog contains designs that are already on file. As new designs are ordered, they are added here. You may choose from these designs, use one of these as a basis and specify modifications, or submit a completely custom drawing electronically or by regular mail.

These molds are designed to fit Lee six cavity handles. RCBS handles also fit, except some newer RCBS handles have reduced diameter screw holes in somewhat erratic locations. Minor modification to the RCBS handle may be required.

Mass produced bullet molds are designed with very conservative, minimal dimensions north of the crimp groove, so that they will chamber in the great variety of firearms out there. Best accuracy is usually accomplished with a much closer fit, tailored to a particular firearm. This catalog is a record of molds I've made. Be aware that due to their custom nature, many of these bullets are designed for a specific purpose or firearm, and won't necessarily fit or feed as drawn in all guns of that caliber.
