Product Information

Order 1 case (5,000) by dropping B off of the item number.

To improve ballistic performances with most available powders, Cheddite has developed its dependable and powerful Clerinox primer (US type). The regularity of Cheddite primers provide a reliable powder ignition at optimum sensitivity will allow your cartridges to perform to your expectations. This regularity is obtained thanks to a strict quality control of all components : anvil, chamber, cap, mixture and to a continuous performance checking of the primer itself as well as when combined with a specific reference cartridge loading.

The non-corrosive explosive mixture does not contain mercuric compounds. The word, "Clerinox" is a trademark coming from the contraction of the words Clerieux (place in France where the primer paint originates) and "inox" which comes from the meaning, inoxidable=waterproof/stainless (and by extension, non-corroding).

★★★★★ **Love cheddites!**

By Debra W. on May 08, 2023

Have never had an issue with a FTF, pierced primer, or any other problem with Cheddites. Since COVID these are all I can find, I used to use Winchester 209s. But will not be switching back as Cheddites are cheaper and work great!

★★★★★ **great primer**

By Mike L. on Oct 08, 2022

been using these primers due to the fact that all you can find . i have to say there a great primer.
