 Excellence on two continents

Bateleur arms:
 P.O. Box 221
 Laingsburg 6900
 South Africa
 Bateleur arms:
 German Barbato 1506
 Montevideo 11200
 Uruguay

For years the very best rifle stocks has been, and still are made with walnut. Walnut has proved to be a ideal combination of beauty, strength and is easy to work with for the stock builder. That is not to say that walnut is the only wood suitable for rifle stocks. Africa have some exceptionally beautiful wood, but it is very hard, and consequently very difficult to work with.

Enter Mr J Bondisio of Naboomspruit. Mr. Bondisio has for years been a avid hunter and gunsmith, and being surrounded by the African bush, he took on the challenge of producing magnificent crafted custom stocks in African hardwoods. Over the years some woods have proved to be better than others, and currently there are three species of hardwoods being used.

These stocks are custom made for the individual, and are only for the most discerning and sophisticated of hunters.

Send us a mail at bateleurarmsmail@gmail.com and we will give you a quote so that you can become one of the selected few to hunt with a very special, truly African rifle.
