Fully Loaded Functional Option

When ordering our Domestic Wood Take-Down Shooting Sticks you have the option ordering them **"Fully Loaded"**.

Our Fully Loaded Sticks Include:

- Upgraded, Rigid Hickory shafts
- Heavy-Duty Canvas Carrying Case
- Matte Black Anodized Connectors
- Hand-Sewn Circular Tops

By choosing to order the standard length "Fully Loaded" sticks with all the options, you **Save \$30** versus adding all the options individually on our standard Red Oak Sticks.

Standard Red Oak Sticks

Red Oak is the most popular flooring species in the country and readily available. While not nearly as rigid as hickory, it is a nice looking wood that will provide good service. The wood is sprayed with a clear polyurethane and the silver connectors are sandblasted. The tops are covered in hand-sewn leather with a tail. Standard Red Oak Take-Down Tripods do NOT include a case, however you can easily add the option during checkout for an additional \$20.

Hickory Shaft Upgrade

Hickory is the most rigid domestic wood available and is a great choice for this application. This is the same species that axe handles are made of, so you know it is extremely tough. We hand-rub a medium brown polyurethane stain on this blonde colored wood to make sure it blends in with your surroundings. Hickory costs you a bit more as it is more difficult to turn and not as readily available as Oak but it is worth every penny.

Aesthetic Options

- Courteney Cape Buffalo Carrying Case**
Make your fully loaded sticks even more special by ordering the optional Courteney Cape buffalo carrying case (\$100).
- Zebra or Cape Buffalo Tops**
Select an "Optional Top Covering" in Zebra or Cape Buffalo for just \$30 more.

About Our Sticks

Our domestic wood shooting sticks measure 70" when fully assembled. The top and bottom sections are 36" when taken apart so they will fit in any full-length, airline approved gun case with room to spare. Because we kiln dry the shafts to remove moisture and make them extra stiff-they weigh less than 2.5 pounds, or about half what the most popular all aluminum brand weighs. The pencil sharpened bottoms are quiet and will securely post in a variety of terrain from sandy to rocky.

Note on Sizing

If you are a hunter who is **taller than 6'2"**, your best choice is to order our **XL Fully Loaded**. The XL Model is **ONLY** available in our "fully loaded" option with the more rigid hickory shafts and all the options.

Using Your Shooting Sticks

Your African Shooting Sticks are very simple to use. First, grasp the two legs that have the black bumpers on them and post the shorter leg (the one without the tops used for padding) out front, in line with where you want to point the rifle. Once you plant the front leg, pull back evenly on the other two legs to form the "V" for your rifle's fore end. Once you familiarize yourself with them, set-up takes just seconds and they expand your effective range considerably. More detailed instructions, accompany each set. You can also learn more about our shooting sticks on our [FAQ's page](#).

We hope you enjoy using them as much as we enjoy putting them in your hands!
