

GunSport Pro

★★★★★ 9 reviews

Quick Overview

GSP15 Electronic Earplugs are ideal for gun sport enthusiasts who need protection from firearm blasts, and for people who need protection from loud continuous noise. GunSport Pro allows natural hearing when no background noise is present, provides sudden impact protection from muzzle blasts and other high impact sounds and gradually protects against loud noise from vehicles or machinery.

Description **Additional Information** **What's In The Box?** **Technical Specifications**

Why electronic hearing protection?

Passive hearing protection is cheaper, and involves no electronic circuit or batteries. However, it is not selective in its attenuation, lowering both low and high sounds. That results in conversation and other important yet not too-loud sounds being drowned and lost.

Electronic hearing protection uses a battery powered electronic circuit that samples your surrounding sound levels in real-time. Safe sound levels are passed through to your eardrums as-is, but the moment sound levels become too high – the hearing protection kicks in and attenuates the sound levels that reach your eardrums.

That means you can keep your hearing protection in at all times in the shooting range. When talking to your instructor – you'll hear them clearly and naturally when no loud background noise is present. When you or someone nearby shoots, or continuous noise from vehicles or machinery becomes present – you are protected automatically!

GSP electronic earplugs use Etymotic's ACCU•Technology with high-definition balanced-armature drivers, high-sensitivity microphones and proprietary wide-dynamic-range compression K•AMP® signal processing.

Designed for:

- Gun sport enthusiasts
- Professional shooters
- Guides and instructors
- Hunters

Dual-Mode Switch

Automatic Hearing Protection + Blast Protection Mode

- Allows natural hearing up to 60dB (normal conversation or background music levels)
- Provides 15 dB of automatic hearing protection between 70dB to 115dB (vehicle traffic, power tools, lawn mower)
- 35 dB noise reduction to protects from blasts and other very loud noises 120dB and over

Hearing Enhancement + Blast Protection Mode

- Amplifies up to 5X in the 40dB to 60dB range (soft to normal conversation levels)
- 35 dB noise reduction to protects from blasts and other very loud noises 120dB and over

Which mode is right for me?

Both modes will protect your hearing from dangerously loud noise levels and blasts, such as gun shots. The modes differ in safe noise levels, such as normal conversation. Hearing Protection mode will let the conversation in your ears, as if you are wearing no protection.

The Hearing Enhancement mode will behave as a hearing aid and amplify the conversation. The right mode for you depends on whether you need or want conversation enhancement or not.

Great for Range and Doves
Love these GSPs. I use them for my Shotgun League and I can hear conversation on the range while also protecting my hearing.
Also when hunting doves I can clearly hear the birds in the trees while my hunting buddies are completely unaware.
I highly recommend the GSPs for anyone who hunts or shoots. They are worth every penny!

not great but OK
Work well for .22 steel challenge, but if someone is shooting a 9mm or bigger, not so much. I'm using the small, long silicone ear pieces, so maybe the foam will be better. We'll see.

Fit like a glove
Super small, discreet and comfortable. I would add some custom molded bases from the audiologist. Work very well.

Happy
I am an NRA Training Counselor and do a lot of work with shooting sports within Boy Scouts. I just worked a campout where shooting sports were a part. It actually installed batteries in my uits hours before the event started. I have other ear protection, both electronic muffs and in ear types, but the Gun Sport Pro is the most comfortable I've experienced. They will become my "go to" hearing protection.

Great for shooting.
I've had Etymotic electronic hearing protectors for many years for shooting and they're great. Decided to wear them in a Crowder concert and they couldn't handle it. All kinds of noise, distortion, buzzing etc. had to remove batteries and use as passive earplugs. Hope I didn't damag them.
