## Product Overview

Annealing has become very popular as of late to rejuvenate your brass so the necks don't crack and improve the accuracy of your handloads. Little Crow Gunworks Brass Annealing Mandrels are made so you can anneal your brass with a minimum of fuss and bother. Simply chuck the mandrel in the drill and insert the case into the chuck. The BAM tool is available in most popular calibers. Annealing time varies with the size of the case. This tool makes it possible to anneal your brass with a simple torch and a 3/8 in drill.

Chuck it up in the drill and place the case in it. Point the torch flame at shoulder and run drill to spin the case until it reaches desired temperature. Dump out and repeat.

Here is a video from the manufacturer (Little Crow Gunworks) on how to use the tool. Fast forward to the 8:00 mark for his instructions followed by a demonstration with a propane torch. https://www.youtube.com/watch?v=wcVdeDwRbc8

★★★★★

**Great Little Inexpensive Tool**

These are great little tools that simply work. The case The perfectly Lyrette tuning to use a socket that some people say to do), exposing the proper amount of case to anneal which keeps the heat away from the head part of the case that you do not want heated. And it fits right into the drill chuck.

★★★☆☆

**Precision Mandrel for Annealing (Brass) using a Drill**

This is a 5 rounded mandrel - like the 5.56 one I own as well - allows you to target the shoulder of the bottleneck brass so you apply the proper amount of heat. You do want to protect the body or lower area of the brass from the heat application. This mandrel does this precisely. How much you will...

**I would buy again if I needed another**

A very good, economical product for annealing for us shooters who are not high enough volume shooters to warrant the expense of a costly annealing machine.

**I would buy again if I needed another**

It is a very good product for a low volume reloader. I couldn't justify one of those expensive high volume annealing machines.

**Keep it cool**

These are a great alternative for annealing small batches of brass. The heat stays focused on the neck and shoulder without overheating the body. Would recommend.

**Great product well thought out.**

Chuck it up in the drill motor and it's quick and easy, and very consistent.

**Great product!**

Makes the annealing process so much easier and consistent and no cooking the brass.
