Muzzleloader Action

The SUMMIT MUZZLELOADER ACTION has all the same great features as the SUMMIT centerfire actions but is designed specifically for long range muzzleloaders. The first main change is the slotted bolt face that was created to use priming modules from Hankins Precision and Arrowhead rifles. The slot is timed perfectly to load through the port with ease. The next main differences is that the bolt stop was moved foreword so the bolt stops in the correct spot every time for easy loading of the priming module. To finish it off we added a awesome spiral fluting to the nitride finished bolt.

This muzzleloader action still has a Remington 700 footprint, integrated recoil lug and a pinned base that utilizes 8-40 screws. THE THREAD TENNON IS 18TPI!!!
